FEATURES & BENEFITS >>

FREEDOM

No more wires

Stream your music to speakers across the room or around your home via the included Sound Blaster Wireless Receiver – no cables or network configuration required.

SIMPLICITY

Plug and play

Works out-of-the-box for PC and Mac (software installation is required for full feature set and wireless control).

CHOICE

Listen to anything

If your computer can play it, you can stream it - music soundtrack, Windows media, internet radio, audio CD.

The Sound Blaster Wireless System: Music Where You Want It

By setting up a Sound Blaster Wireless system in your home, you can stream music throughout your home. Additional Sound Blaster wireless receivers or speakers let you enjoy music anywhere in your home. Installing the included software lets you control which rooms receive music.

The Sound Blaster Wireless system communicates via a 2.4 GHz RF transmission and has a range of up to 100 feet. The system does not ride on your home's network. Instead, it uses a dedicated wireless connection, so you don't even need a wireless network router to use it, and you'll always have clear, uninterrupted music.

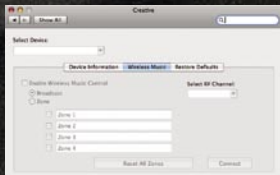

SOFTWARE >>

Fuss-free control

Sound Blaster Wireless Transmitter comes with easy-to-use software to manage and control your wireless function.

For PC

For Mac
